

Task Manager Website Report

Project Name: Trackula

1. Summary:

Trackula manages the task flow for one or more persons, where an admin is allowed to create task lists and fill them while he and the user may complete, they will be added to a database that runs on 24/7 server and is then checked weekly. After each week an algorithm takes these tasks and redistributes them according to the task completion percentage, and adds or subtracts a block portion of time during the next week as reward or punishment based on the results, as well as developing a weekly report and recommendation plan.

2. Objectives:

- a. Allow customer to create task list and fill them.
- b. Allow customer to delegate tasks to other users for completion.
- c. Manage customer time more efficiently.
- d. Set up recommendation plan & weekly productivity report.

3. Scope:

- Individual User
- Company/corporation/Small teams
- Devices: Desktop, tablet, and mobile.

4. System Development Lifecycle:

1. Planning:

- Create Database schema
- Create Use-Case Scenario
- Set up Admin vs User Roles

2. Analysis:

- See method of collecting task Data from Data base
- Plan Algorithm to convert data into plan & report

3. Design

- =Used Css & Html for website design
- Bootstrap for container layout

4. Development:

- Used Microsoft Vs Code for developmeny
- Created Php session for database manipulation
- XAMP for local server.
- php my admin for database

5. Testing:

- Added/Update/Delete done successfully,
- Task lst and tasks into separate connected databases

6. Deployment:

- Could not find free hosting websites
- Get domain and hosting

7. Key Features:

Task Management:

- a. Create, edit, and delete tasks.
- b. Organize tasks using categories, tags, and priorities.

Collaboration:

- c. Assign tasks to team members.
- d. Track progress with status updates.
- e. Add comments for discussions.

Notifications and Reminders:

- f. Email and push notifications for deadlines and updates.

Analytics:

- g. Visualize task completion rates and team performance.

8. Problem/ Solution:

Problem: Reading the data in a correct manner for the recommendation plan.

-Solution:

Try to create a machine learning algorithm based on the data structure of each user's tasks.

9. Future Enhancements:

-Creating the Algorithm.

-Modifying the website to include the new feature.

10. Conclusion:

-The website works manually but new sessions must be added to include the recommendation Algorithm and its features.
